Subject: Third Site Schedule

Norm:

Thank you for the productive meeting. We look forward to accelerating the schedule for groundwater extraction at Third Site. My understanding of the schedule is that by October 18, 2013, a skid-mounted treatment system and tanks will be delivered to the Envirochem site and properly connected to treat all water collected from the trench system (currently less than 500 hundred gallons per day). As we discussed 21,000 gallon fixed axle or other tanks should be readily available. At the same time groundwater extraction will begin at Third Site and the water will be pumped into existing fixed-base tanks at the Envirochem site prior to batch treatment. By October 25, 2013, a work plan for additional investigation work related to Third Site will be submitted for review. The investigation will include finer vertical and horizontal grid spacing to better delineate groundwater contamination within the source areas and plumes. The data produced through this effort is intended to better inform the planning of additional treatment.

Thank you.

Thanks Matt

We will be prepared to discuss at our meeting.

Norm:

Thank you for the proposals. We look forward to your team's introduction to these large documents prior to our review. In the interim please provide an update to the schedule for groundwater extraction. Analytical data collected this summer supports our previous requests to begin groundwater extraction without further delay.

Thank you.

Subject: Third Site

Matt

In preparation for our Friday meeting in Chicago at 1:00 pm (central), 2:00 pm (eastern), please find attached:

- (a) as to the DNAPL area, a Supplemental Data Collection Plan prepared by Environ, and
- (b) as to the downgradient plume, a conceptual level proposal prepared by Specialty Earth Sciences, LLC (SES) for Environ. The implementation of the SOCORE technology described in the SES proposal would be augmented by the implementation of the Third Site pump and treat remedy.

Please arrange for a conference phone to be available in the conference room where we are meeting. As to the DNAPL area study, we expect that Dr. David Major of Geosyntec Consultants, Inc. will participate by phone, and as to the downgradient plume, Jason A. Swearingen, Technical Director of SES will participate by phone.

Thanks

Norm Bernstein
